

# 4840-1054: Media Computing in Practice (Summer 2022)

April 6, 2022  
Yusuke Matsui

# Information

## Instructor

- Yusuke Matsui <https://yusukematsui.me>

## Dates

- Wednesday, 2nd period (10:25 - 12:10)

## Location:

- Zoom (See ITC-LMS for the Zoom URL)

This lecture is given by the Department of Information and Communication Engineering, Graduate School of Information Science and Technology. However, it is open to any graduate student of the University of Tokyo.

## 4840-1054: Media Computing in Practice (Summer 2022)

### Overview

This lecture will be given in seminar-style. Students will read, implement, and present a recent paper. The code must be publicly available as a GitHub repository. In addition, students will update other students' repositories using Pull Requests.

- Instructor: [Yusuke Matsui](#).
- Dates: Wednesday, 2nd period (10:25 - 12:10)
- Location: Zoom (see ITC-LMS for the zoom URL)

### Goal

- Learn about recent research in the multimedia field (including but not limited to CV, NLP, ML, etc.)

Web: <https://media-comp.github.io/2022/>

## Schedule

Date	Contents	Presented by	Slides	Repository
April 6, 2022	Guidance	Yusuke Matsui	<a href="#">here</a>	<a href="#">2022-matmul</a>
April 13, 2022				
April 20, 2022				
April 27, 2022				
May 11, 2022				
May 18, 2022				
May 25, 2022				
June 8, 2022				
June 15, 2022				
June 22, 2022				
June 29, 2022				
July 6, 2022				
July 13, 2022	(invited talk)			

# Goal

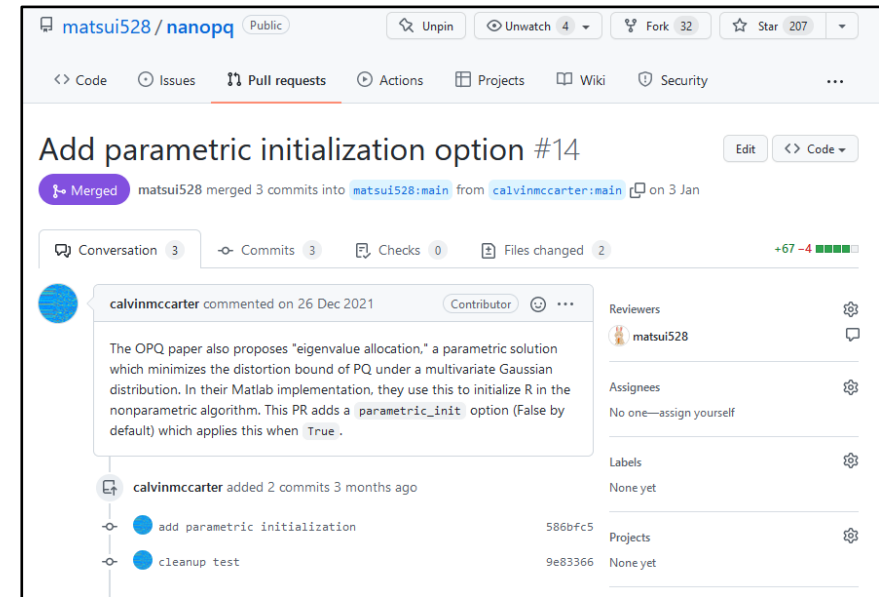

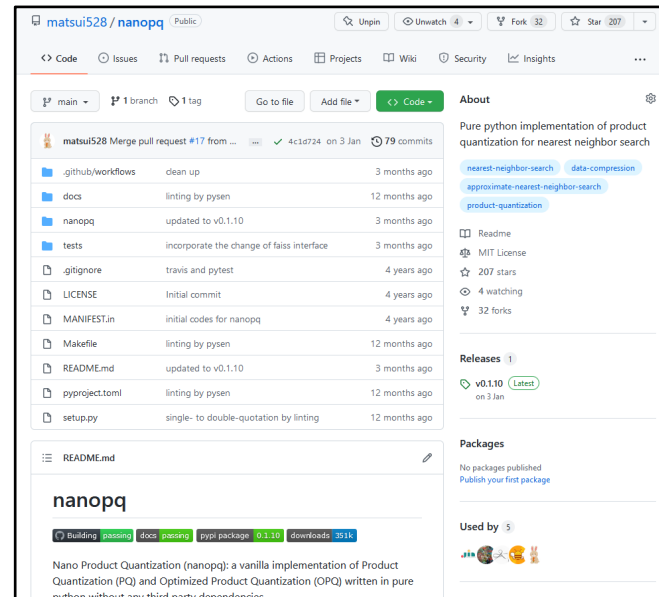

- Learn about **recent research in the multimedia field** (including but not limited to CV, NLP, ML, etc.)
- Learn how to publish your research through the **release of source code**
- Learn modern software development through the experience of **modifying other students' source code** using Pull Request

# Prerequisites

- Coding skill to reproduce existing work
- How to use Git/GitHub
- GitHub account
  - ✓ Your GitHub Account name will be public.
  - ✓ If you don't like it, please create a new account.

# Seminar & hands-on style

## Step 1:

- Read a paper
- Code it
- Summarize it
- Present it

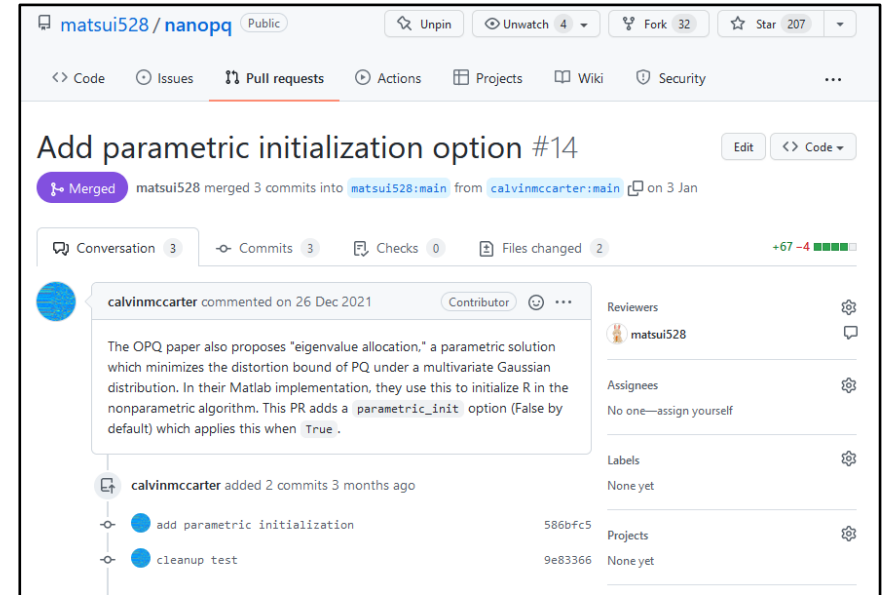

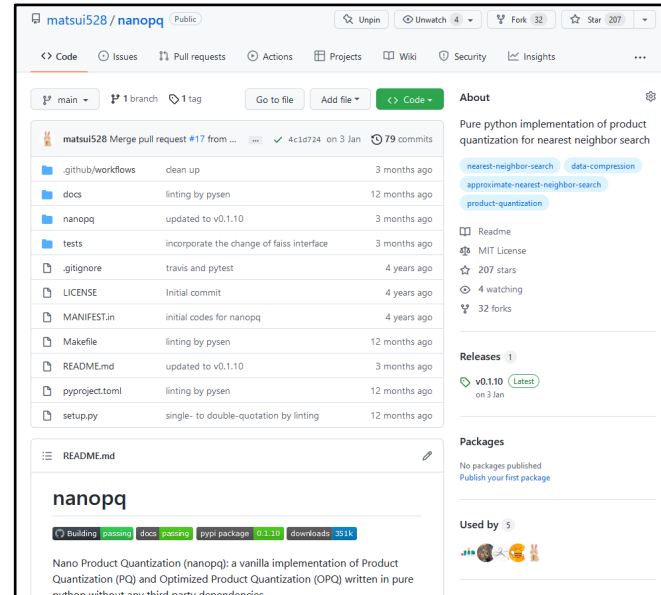

## Step 2:

- Create a repository for the code
- Make the repository publicly available

## Step 3:

- Run others' repositories
- Create a Pull Request to update them

# Seminar & hands-on style

## Step 1:

- Read a paper
- Code it
- Summarize it
- Present it

## Step 2:

- Create a repository for the code
- Make the repository publicly available

## Step 3:

- Run others' repositories
- Create a Pull Request to update them

## Step 1:

- Read a paper
- Summarize it
- Code it
- Present it

- Pick up your favorite paper in your field
- Any research field **w/ coding** is acceptable
  - ☐ Ok: CV, NLP, ML, CG, HPC, Audio, OS, DB, Network, PL, ...
  - ☐ No: Pure theory w/o coding. Hardware.
- Don't select a paper from your lab

## Step 1:

- Read a paper
- Summarize it
- **Code it**
- Present it

- Implement the proposed method in the paper
  - ✓ (mandatory) reimplement the method
  - ✓ (good) benchmark it, improve it, ...
- If the official code is available, it'd be better to implement it yourself and compare it with the official one
- Don't rely too heavily on existing frameworks
- Any programming language is acceptable: C/C++, python, MATLAB, Julia, ...
- Recommended OS: Ubuntu

## Step 1:

- Read a paper
- **Summarize it**
- Code it
- Present it

- Make slides
  - ✓ Explain the original method in the paper
  - ✓ Explain what you've done (ingenuity in implementing the method, benchmark result, etc.)
  - ✓ The slides will be **publicly available**
- Prepare X min presentation
  - ✓ Include self-introduction
  - ✓ Explain carefully and visually
  - ✓ Assume that **the audience is high school students and knows nothing about your area.**

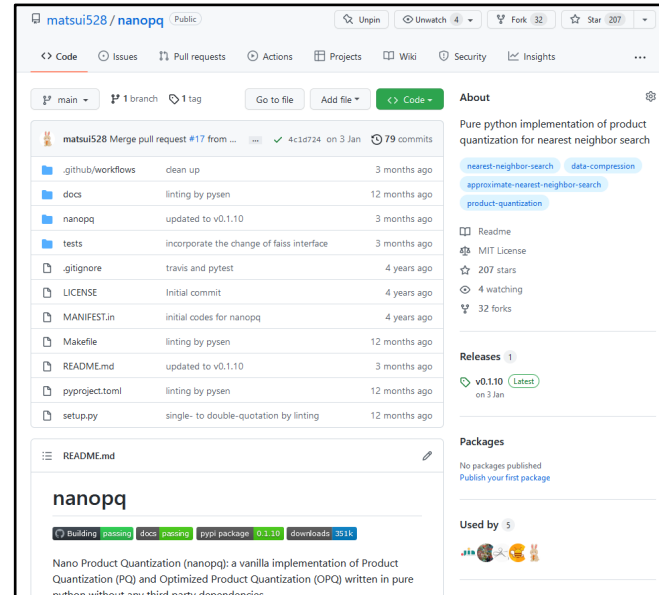

## Step 1:

- Read a paper
- Summarize it
- Code it
- **Present it**

- During the lecture, present what you've done
  - ✓ 3 - 4 students are expected to present in each lecture
- Good presentation is...
  - ✓ After listening to the presentation, the audience will gain **one new piece of knowledge.**

# Seminar & hands-on style

## Step 1:

- Read a paper
- Code it
- Summarize it
- Present it

## Step 2:

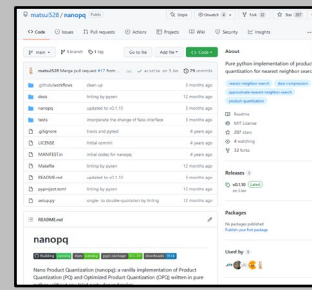

- Create a repository for the code
- Make the repository publicly available

## Step 3:

- Run others' repositories
- Create a Pull Request to update them

## Step 2:

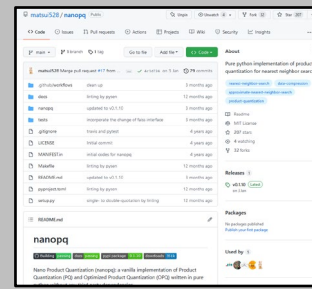

- Create a repository for the code
- Make the repository publicly available

- I will give you a **public** repository
- Upload the source code you wrote
- Reproducibility is a key
  - ✓ You should maintain your repo such that **other students can run it and reproduce the result**
- Follow the basic structure of the repository

## Step 2:

- Create a repository for the code
- Make the repository publicly available

- Repositories must be located under media-comp organization  
<https://github.com/media-comp>
- Example of python repository (skeleton code)
  - ✓ <https://github.com/media-comp/2022-matmul>

➤ The repo name should be "2022-XXX"  
➤ Let me know "XXX"

# 2022-matmul

Reimplementation of the matrix multiplication proposed in the following paper: XYZ et al., "Simple Matrix Multiplication", IEEE XXX, 2022.

## Prerequisites

- You need to install Python 3.8+

# 2022-matmul

Reimplementation of the matrix multiplication proposed in the following paper: XYZ et al., "Simple Matrix Multiplication", IEEE XXX, 2022.

➤ Explain the original paper

## Prerequisites

- You need to install Python 3.8+
- Install the required packages by:

➤ Write how to setup

```
pip install -r requirements.txt
```

## How to run

➤ Write how to run

```
python bench.py
```

You will obtain the result:

➤ For ML, write the both training and testing codes if possible

```
7.867813110351562e-06 sec  
Error: 0
```

➤ Reproducible at least on gh actions!

# Implement $Y=AX+B$ #1

➤ Good: If you have an idea to extend the method, please write it on "Issues"

Open matsui528 opened this issue 13 seconds ago · 0 comments

matsui528 commented 13 seconds ago

Currently, only  $Y = AX$  is implemented. Want to implement  $Y = AX + B$ .

matsui528 added the **good first issue** label now

➤ "help wanted"

# Seminar & hands-on style

## Step 1:

- Read a paper
- Code it
- Summarize it
- Present it

## Step 2:

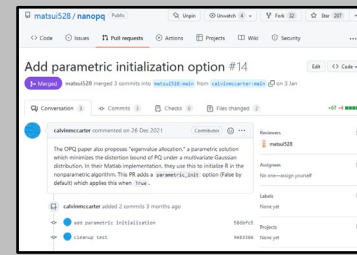

- Create a repository for the code
- Make the repository publicly available

## Step 3:

- Run others' repositories
- Create a Pull Request to update them

## Step 3:

- Run others' repositories
- Create a Pull Request to update them

- Run others' repositories

- Create **Pull Requests**, e.g.,

- ✓ *The code doesn't work in Mac, so update XXX and YYY*

- ✓ *Add another method for benchmark and run it again*

- ✓ *Find and fix a bug*

- ✓ *Propose another component to improve the method such as better IO*

- If there're "help-wanted" or "good-first-issue", you can try it

## Step 3:

- Run others' repositories
- Create a Pull Request to update them

- It is usually nice idea to create issues and discuss the point before submitting PRs.
- Remarks:
  - ✓ **modern software development  $\cong$  communication**
- Reference:
  - ✓ Opensource guideline <https://opensource.guide/>

# Print in milliseconds #3

➤ You can create an issue on other's repository

 hoge528 commented 31 seconds ago  

Hi!  
It would be easier to read if the results were displayed in milliseconds instead of seconds. May I make such a PR?

 matsui528 commented now Contributor  

Sure! Good idea 👍

Successfully merging this pull request may close these issues.

matsui528 changed the title Print in milliseconds Change the format of print function, from seconds to milliseconds now

## Step 3:

- Run others' repositories
- Create a Pull Request to update them

- Good issues
  - ✓ Be humble
  - ✓ Discuss precisely (e.g., for bug-report, write all necessary information such as OS, version of software, etc)
  - ✓ Don't paste screenshot. Write a log message
- Good PRs
  - ✓ Don't make drastic changes
  - ✓ A small but important contribution
  - ✓ Independent and easy to review

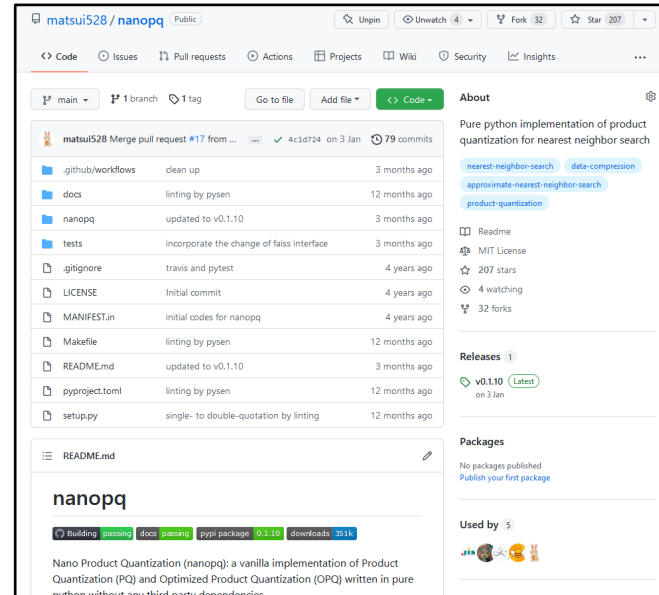

## Step 3:

- Run others' repositories
- Create a Pull Request to update them

- If you receive PRs
  - ✓ Do review
  - ✓ Accept or reject
  - ✓ Don't be aggressive when asking for corrections

# Seminar & hands-on style

## Step 1:

- Read a paper
- Code it
- Summarize it
- Present it

## Step 2:

- Create a repository for the code
- Make the repository publicly available

## Step 3:

- Run others' repositories
- Create a Pull Request to update them

## Step 4:

➤ Short presentations?

- Another round of (short) presentations about PRs
  - ✓ Explain the PRs you created
- Depends on the number of attendees

# Computational resources

- For CPU:
  - ✓ Your own computer
  - ✓ Cloud IDE: Google Cloud Shell Editor
    - <https://cloud.google.com/shell/docs/launching-cloud-shell-editor>
    - Free
- For GPU:
  - ✓ Your Lab computer (Ask your professor in advance to see if it is acceptable to use Lab GPUs for this lecture.)
  - ✓ Cloud IDE: Amazon SageMaker Studio Lab
    - <https://studiolab.sagemaker.aws/login>
    - Free

# In summary: (1) when you present

- By 23:59 of the day before your presentation,
  - ✓ Let me know the title of the paper
  - ✓ Let me know the name of the repo (I will create one for you under <https://github.com/media-comp> )
  - ✓ Push your code to the repo
  - ✓ Submit your slides (pdf) to me
  
- You can reach me via Slack if you are a student of IST ICE
- If not, e-mail me [matsui@hal.t.u-tokyo.ac.jp](mailto:matsui@hal.t.u-tokyo.ac.jp) or DM me via twitter [@utokyo\\_bunny](https://twitter.com/utokyo_bunny)

# In summary: (2) after your presentation

- If you receive a PR, review and merge/reject it.

# In summary: (3) when you're not a presenter

- Listen to the presentation
- After the presentation, do the following if you like the paper
  - ✓ Run the code
  - ✓ Send PRs

# Assessment

- Presentation + Coding (Repo) + PR
  - ✓ Please submit at least **three Pull Requests** to different repositories
- Attendance?
  - ✓ I'm tracking your log-in information of Zoom
  - ✓ Come to the class every time
  - ✓ Depending on the number of students attending the lecture, attendance may be used as a grade.

# If you wish to take this class

- Please fill out the survey at ITC-LMS **today** (mandatory)
  - ✓ I will make a schedule of presentation
  
- If anyone could present next week, I'd appreciate it!

# Next week

- The 1<sup>st</sup> time presentation, or my lecture

## Questionnaire

- Have you ever reimplemented an existing work in your field?
- Do you know how to use Git/GitHub?
- Do you know “fork”?
- Have you ever created a Pull Request?
- Have you ever reviewed a Pull Request?
- Do you know how to use GitHub actions?
